

Discover the Power of Parks Program- August at Miller State Park

First Impressions

Scary or sweet? Friend or foe? We assume many things about animals based on how they look. Come join us for a fun discussion on why we think what we do on various critters. You may have your opinion changed by the end!

Beaks and Feet are Neat!

How is a duck's beak like a strainer? What do hummingbird beaks and straws have in common? Ranger Carolyn is here to show you!

Shadows and Silhouettes

Even if a bird is high up in the sky, or hidden in the shadows, you can still identify it! Learn the shapes and outlines of common birds, so you can find them on your walks!

Wildlife CSI

Who broke into the apple shed? And who nibbled on the fence? Learn how to identify tracks, scat, and other signs that an animal had been here with these mini "crime scenes". Anyone can be a wildlife detective!

Fabulous Feathers

They're pretty, they tickle-and they're fully functional! Learn why feathers are certain colors, how they help birds with flight, and more in this interactive program!

Up in the Air

Do you like to watch clouds? Did you know that there are different types of clouds, which occur with certain types of weather? Learn the names of clouds and what weather they predict in this fun interactive program!

Marvelous Migration

Every year, millions of animals- from birds to butterflies-embark on a journey known as *migration*. But why? And how do they make it to their destinations? Come find out what it's like to be part of a flock!

Let's Bee Friends Forever!

Bees, butterflies, hummingbirds, and even wasps work hard to keep New England's flowers pollinated. But what exactly is pollination, anyway, and why is it so important? Come find out!
